*Read through the information found on the assembly resource, which provides an overview of Luca Curci's project, The Link. Would you like to live there?*

## What is the Link Project?

The Link is a design for a vertical city made up of four towers joined together.

The architects describe it as 'a self-sustainable city-forest that will produce oxygen for cleaner air.'

The Link will also control the temperature and lighting system for all who live there.

### What are the aims of the Link?

The Link project aims to improve the overall quality of life by promoting sustainability, smart city technology and tackling the rise of urban sprawl (when cities and towns grow very quickly without thinking about the local area).

## Interesting facts about the project…

There is space for over 2 million plants to grow to help improve air quality.

Each tower will have many facilities including, swimming pools, social clubs and markets.

The tallest tower, is designed to house all the 200,000 residents and will have 300 floors!
